About TWN

TWN boasts a wealth of experience in Fibreglass Mould 'GRP' stretching back over 35 years combined with the added advantage of in-house pattern and mould making.

We specialise in the design, production and installation of architectural GRP components such as mosque and temple domes, minarets, roof turrets and clocks towers, but our expertise doesn't stop there! We can also produce straight-forward solutions for cladding to shop fronts in pre-formed sections, dormer windows, chimneys, canopies and columns.

Our workshops not only deal with the GRP elements of a project, we also have our own in-house facilities for processing wood and fabricating metal for items such as substructure support frames, chandelier supports for domes and ornamental finials and weathervanes.

Working closely with the client, designers, architects and structural engineers, our team of experts will ensure that your project runs smoothly from concept to completion.

Due to our knowledge and practical skills with GRP, we can turn our hand to almost any design for any project. We also have full in-house metal fabrication and CNC machining facilities.

GRP Structures - *Light Wells*

We produce a wide range of bespoke decorative GRP features including:

- *Chimneys*
- *Columns*
- *Cornice*
- *Dormers*
- *Fascias*
- *Guttering*
- *Light Wells*

Roof Turrets - *Turret with Glazing*

A white roof turret with a dark dome and three circular windows. The turret is octagonal in shape and features a decorative base. The dome is dark and has a pointed finial on top. The windows are circular and have a white frame with a cross-shaped muntin. The turret is set against a clear blue sky and some greenery in the background.

Timber, Lead and other material finishes can be replicated.
